

### GREATER YIELDS OF CRYO-PRESERVED CELLS

NO ANTIGENTICITY CONCERN

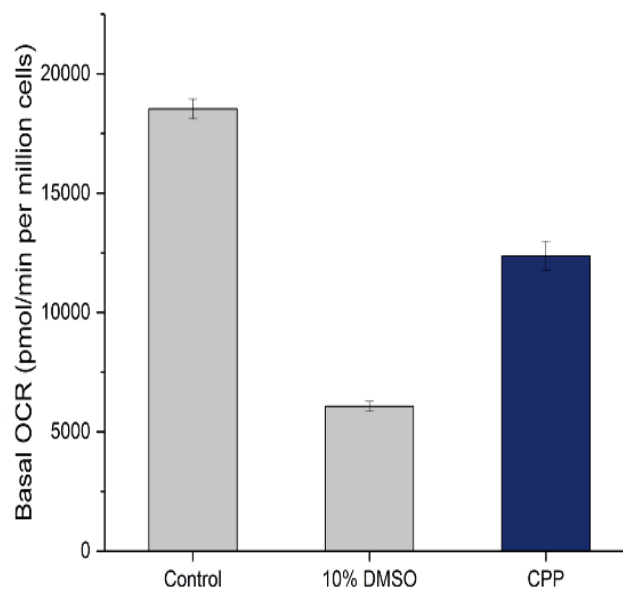

NO TOXIC VITRIFICATION

CryoProtectPURE is a DMSO-Free and Serum-Free cryopreservation medium for a variety of cell and tissues line. Using CryoProtectPURE increases the cell viability after thawing and produces healthier cells.

#### BETTER CELL LIFE AFTER CRYOPRESERVATION

Membrane integrity of cells upon thawing following cryopreservation using both 10%

#### HEALTHIER CELLS POST THAW

Mitochondrial activity 3 days following cryopreservation in 10% DMSO solution and CPP. The results were compared with never frozen control cells cultured in parallel samples (n=9, nested replicate of 3). Basal OCR rate following cryopreservation using CPP was 48% higher in comparison to DMSO solution indicating less
